Reason: Add some more informationRobert Saunders (governor) Robert Saunders (1676 - 4 January 1711) was an English politician who sat in the House of Commons in 1710. Saunders was the son of Richard Saunders, 2nd Baron Carrington of Cosebergh. He matriculated at Wadham College, Oxford in 1693, aged 15. He was awarded BA on 5 March 1696. He studied law and became a barrister in 1696. He married Sir William Legge, 2nd Baronet's daughter Eleanor on 18 December 1700. Saunders was returned as Whig Member of Parliament (MP) for Winchelsea at the 1710 British general election. Saunders died suddenly on 4 January 1711. It's quite simplistic, but it maps almost perfectly with the principles of functional programming. 1\. Flux-style dispatch comes from object-oriented programming. 2\. All actions are expressed as change-ofstate, and those changes are kept separate from the data model (like keeping state apart in a traditional object-oriented approach). 3\. The Flux actions and reducers are "pure functions" that never access data outside of the store. The store represents the entire application state, and nothing outside it. $\sim \sim \sim$ brianberns I'm not sure why you say "pure functions". If I'm reading your source code correctly, your functions are recursive, i.e. they have access to the state of the data they're dealing with. $\sim \sim \sim$ folz Since I haven't read any of the actual source code for redux-saga, this might not be the case. But it's nevertheless important to distinguish between pure functions and pure functions that do not rely on any input. ----- jonalmeida Can anyone
