Sonographic fetal weight estimation for use in the management of the high-risk pregnancy is a time-honored clinical practice. More recently, use of this method in the neonatal period as well in the assessment of the infant at birth is becoming more widespread. These actions have occurred

at the same time that sonography has become an accepted diagnostic tool for certain fetal and neonatal pathologies. Real-time sonography is a non-invasive method of obtaining fetal biometry, which involves multiple measurements of the fetal anatomy. Both sonography and ultrasound have been used to estimate fetal weight. Sonographic weight estimation has
