Microsoft Paint You should not think of Paint as a photo editing tool, but rather as an equivalent to crayons on paper, crayons on cans of spray paint, and crayons on cardboard. As such, it is not a full-fledged photo editing program. You can use it to cut a photo into pieces, cut a photo, apply a photo filter, and so on. Paint is fun, easy, and free. However, users often find it difficult to do any more than the basics with it. You can use Paint to make comics or paint a rough draft of a picture, but if you're using it for photo editing, it's not a game-changer. In fact, I would say it's the exact opposite of Photoshop. Some of the tools in Paint do exactly what you think they do: such as Clipping and Paths. However, the Paint toolbar is extremely limited in terms of tools and creates a tedious workflow if you are a novice. I would not recommend using Paint as a photo editing tool. If you absolutely have to use it, do only the basics and keep in mind that you can do so much more with Photoshop. * Other Photo Editing Tools There are any number of other photo editing tools out there. Some specialize in one thing—for example, Gimp is a great tool for photo editing and is free. Others specialize in different things—for example, Pixelmator is a great free tool that is simple and fast and versatile enough to do several things. * For a Beginner's Photoshop Guide, Make sure you access the free online book at the end of this chapter.

Dodge highlights areas of the image by lightening the pixels there, while Burn lightens pixels by increasing the brightness of the pixels that surround it The Smudge tool is similar to the Dodge and Burn tools. There are three distinct stages in the life cycle of a forest: establishment, retention, and succession. We spend much of our time and energy on the first stage. This is characterized by the... Scientific terminology is important for understanding the processes of organic matter cycling in forests. It also helps us communicate information about these processes to others. Here are a few questions and the terms that go along with them. Why did I experience a leg cramp on this trail? What caused it? What was this leg cramp like? I'm sure you've experienced pain in your leg. It may be a bruised knee or swollen ankle. It's hard to miss the thick, soggy grass on the sides of the trails where we walk. What else do you notice out on the trails? Trail bushings are made from plastic or rubber. They are used to protect the surface of the trail from the abrasion that occurs from the weight of the bicycle tires. In the winter, many hikers use rams or walk/ride quads. Ram boots and front and rear suspension are designed to give better clearance and stability on slippery surfaces. Which comes first, the suspension or the boots? The term "flush" is a hint of its origin. It originates from flush-mounted post-and-rail fences, fences with a single post that support a bar between the rails. Knowledge is important to any gardener, but it's especially important for horticulturists. We need to know the structure of the plants we grow. In the following animation, we look at a large beech that is forming a conventional sprout, a bulbous-rooted stock that produces corms and, as the corms mature, stems. What do pines, oaks, and maple trees have in common? At one time, all lived in the same area. Now that the land has been cleared, all of these trees are able to survive for a long time. Where did they come from? That's what makes them different. The definition of a bog is a very

wet, mucky soil. A lot of moisture gathers in the soil and is held there, making it easy for plants to live in. Consider that, on average, one degree Fahrenheit (one degree C) of rising temperature is equal to about two percent moisture loss. The gradual decline of the
